

Global 3000 Service Pack Note

General Ledger - Statement Definition Buttons

Author	SHUT	
Project	ZG60_000246.docx	
Version	1.0	1 of 3

INTRODUCTION

This service pack updates the buttons associated with moving lines.

The changes are to the buttons in Statement Line Maintenance and Column Definition Maintenance.

We received feedback that using the name 'Insert' for the button that selected where a moved line/column was to be located was causing confusion as normally 'Insert' means insert a new entry. We have therefore merged the former 'Move' and 'Insert' buttons into 1 button that toggles between the two options. In addition the 'Insert' option is renamed 'Insert Moved'.

DOCUMENTATION CHANGES

Statement Line Maintenance

Move	(Not if a line has already been selected to move) - Move the current line elsewhere. When selected the
-	current line will disappear. You should then select the line where you want it and press [Insert Moved].

Insert Moved (Only if a line has already been selected to move) – Insert the line previously selected to move.
