Global 3000
Service Pack Note

Stocktake Report - Export Allocated Qty

INTRODUCTION

This service pack extends the stocktake report export file to include the allocated quantity.
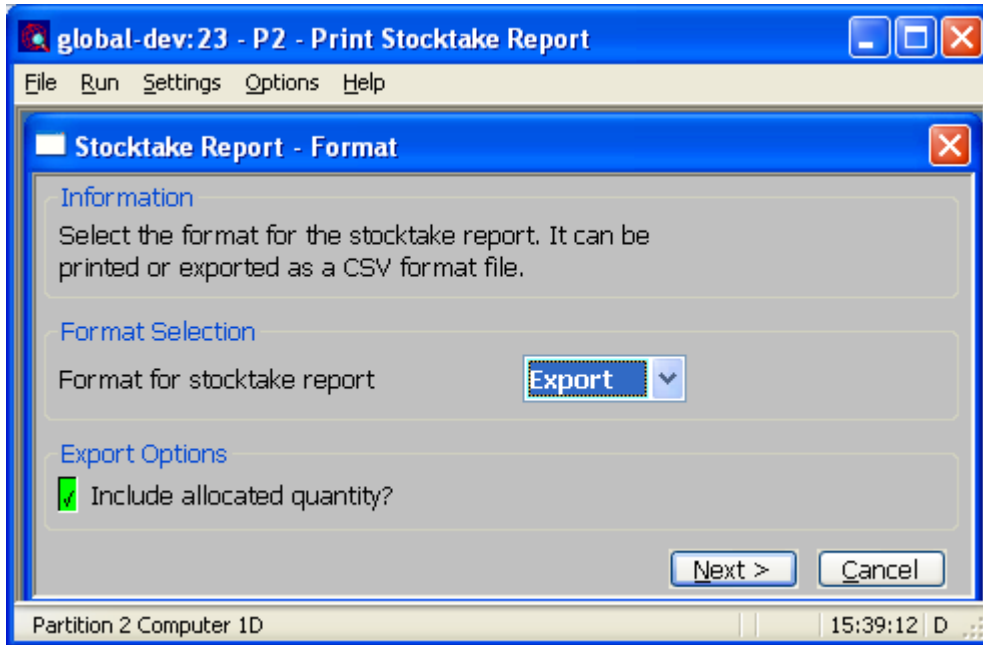

The stocktake export (csv format file) has been extended to include a new option that allows the file to include the allocated quantity (for the product/location).
The following limitations apply: • The allocated quantity is not included (set to zero) for batch tracked products. • The allocated quantity is not included (set to zero) for serialised products. • The allocated quantity can only be included for stocktakes where the stock is still frozen.

Stocktake Report Options Window

Include allocated quantity?	*(Only available when the output format for the report is export).* Set this to include the allocated quantity (for the product/location) in the export file.
Note	The following limitations apply:

- The allocated quantity is not included (set to zero) for batch tracked products.

- The allocated quantity is not included (set to zero) for serialised products.

- The allocated quantity can only be included for stocktakes where the stock is still frozen.
