<b>Version</b>	1.0		1 of 2

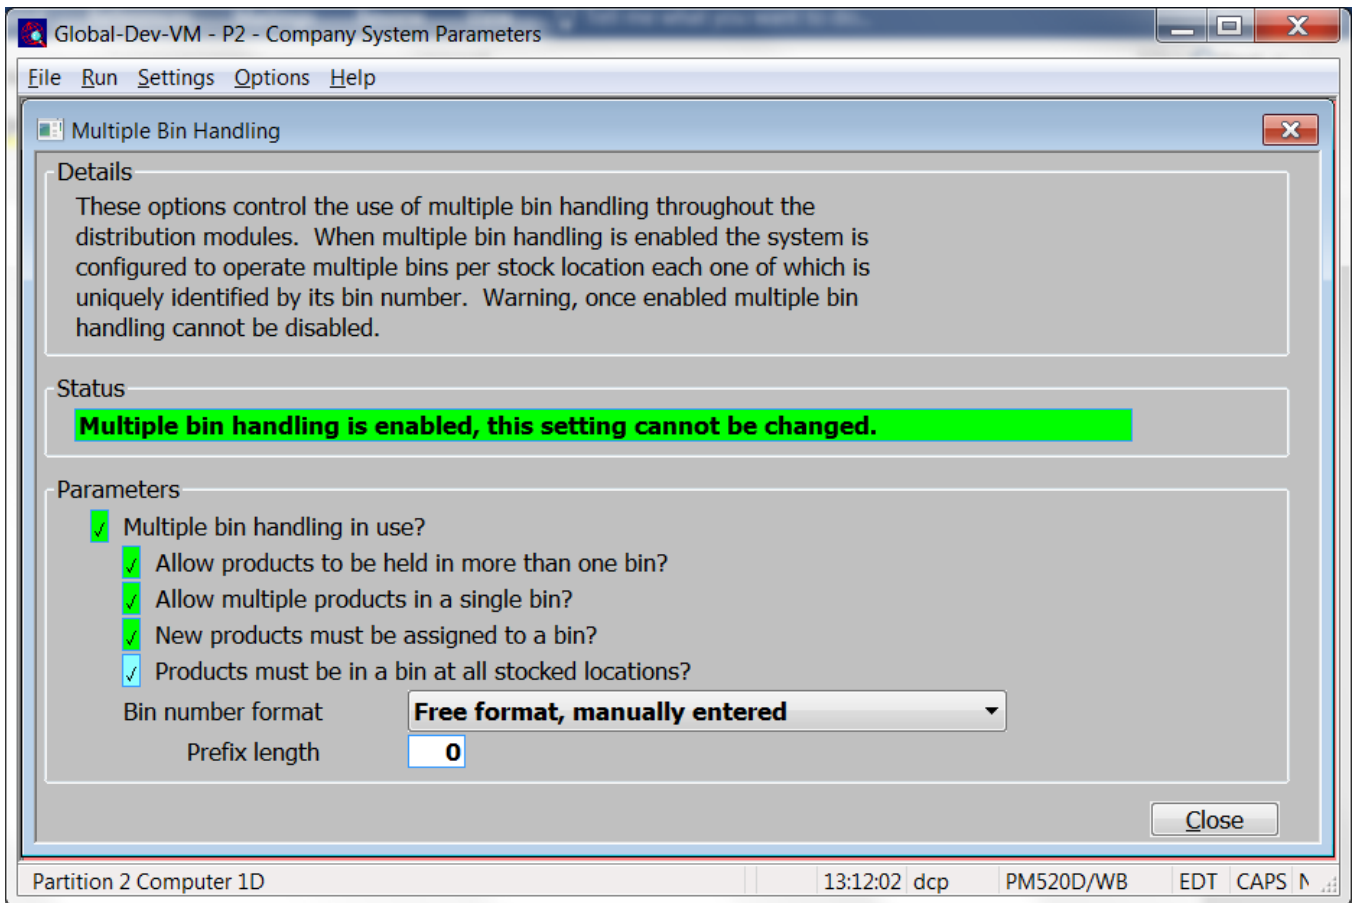

## INTRODUCTION

This service pack provides the ability to force products to be held in a bin at each location they are stocked.

A new system parameter has been added to the 'Multiple Bin Handling' options. When the new option is enabled, product maintenance forces stocked products to be held in at least one bin at every location at which the product is stocked.

## DOCUMENTATION CHANGES

### Distribution Options – Multiple Bin Handling Window

#### Products must be in a bin at all stocked locations?

*(Only available if multiple bin handling is in use. Not available for single location systems).* When this is set, product maintenance forces the user to ensure that stocked products are held in a bin at each location at which they are stocked.

#### Note

This setting does not apply to locations where there are no bins defined.
