

Global 3000 Service Pack Note Country Codes - EC Taxation

Author	DCP		
Project	ZM60_000555.docx		
Version	1.0		1 of 3

INTRODUCTION

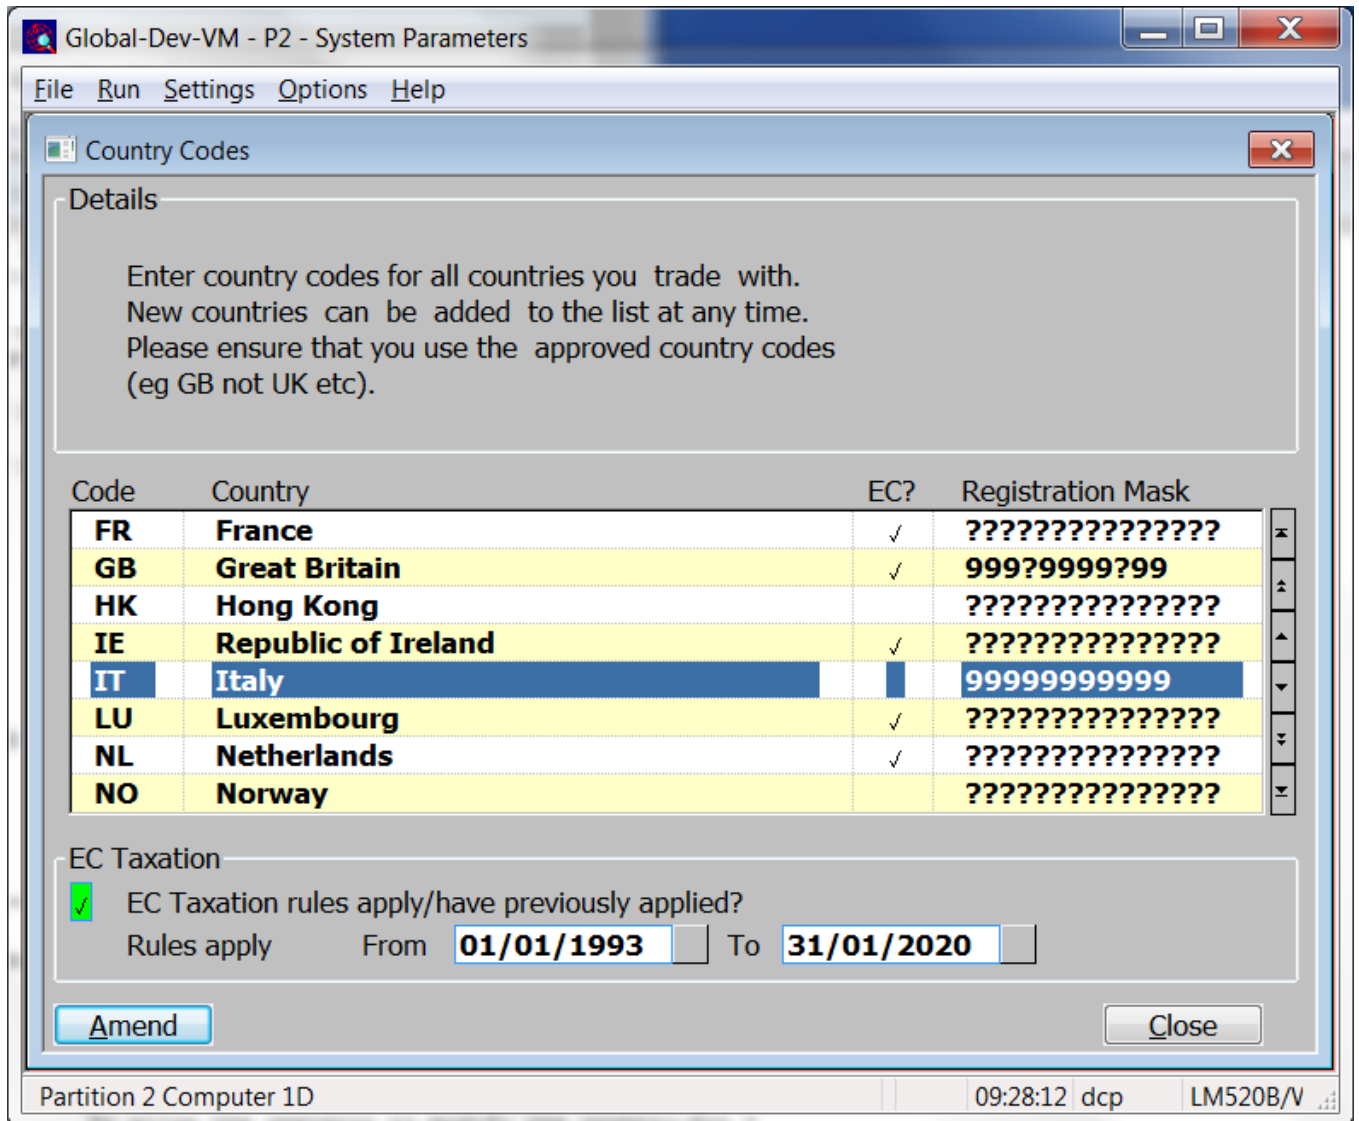

This service pack provides the ability to control EC taxation rules using a date range.

The changes introduce a new prompt and date range within Country Code maintenance (Administration Parameters). The new prompt and date range control when the EC taxation rules apply (in place of the existing EC membership flag).

Note, the new options control when EC taxation rules are applied, they do not indicate EC membership.

System Parameters (Administration) – Country Codes Window

EC taxation rules apply/have previously applied?

Set this if the EC taxation rules apply or have previously applied to the country. This is independent of whether or not the country is currently configured as being in the EC.

EC taxations rules apply from...to

(Only if the EC taxation rules apply/have previously applied) These dates can be used to control when EC taxation rules apply. Either date can be left blank to indicate no check required.
