Version	1.0		1 of 3

INTRODUCTION

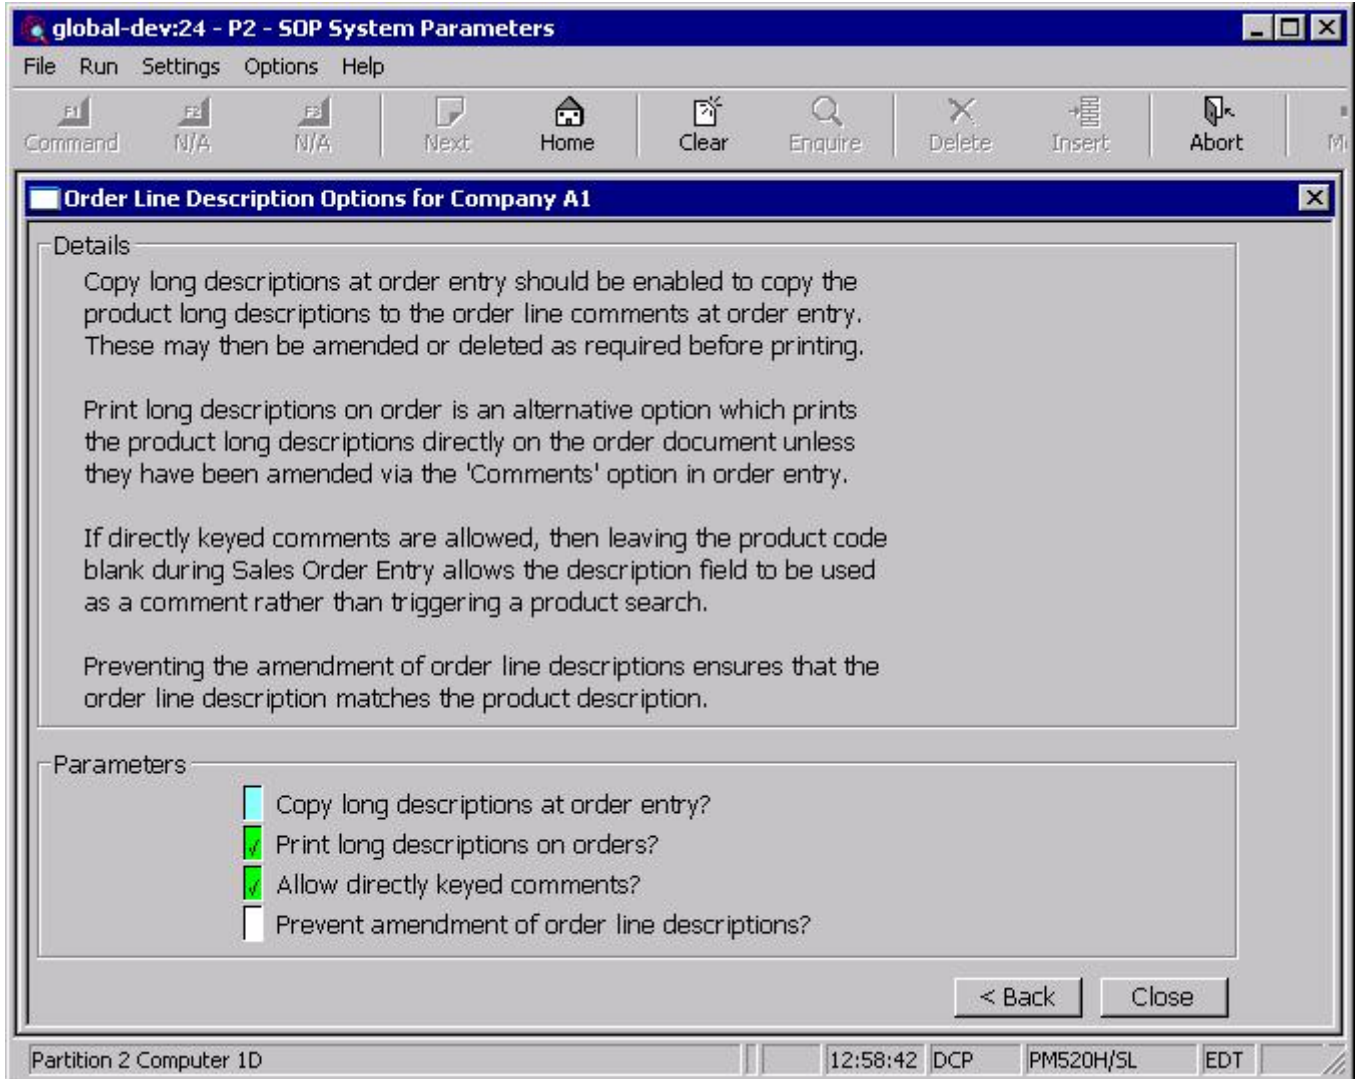

This service pack provides the ability to prevent the user from amending the order line description.

Sales order entry and the transaction desktop default the order line description to the product description, both provide mechanisms for changing this. This service pack introduces a new system parameter that provides the ability to prevent users from changing the order line description thus fixing it as the product description.

The new system parameter (found within S.O.P. Parameters\Order Entry\Options) is named 'Prevent amendment of order line descriptions?'. When set both Sales Order Entry and the Transaction Desktop disallow amendment of the order line description.

Order Line Description Options Window

Prevent amendment of order line descriptions?

Setting this parameter prevents order line descriptions from being amended; this ensures that the order line description is the same as the product description.

Note Directly keyed comment lines are not affected by the 'Prevent amendment of order line descriptions' parameter.
